

201 stainless steel wire:

201 stainless steel screw line, 201 stainless steel spring wire, 201 stainless steel full cord, 201 bright stainless steel wire, 201 stainless steel electrolysis line, 201 stainless steel axletree wire. Screw line is mainly used for screws, springs or other elastic hardware products. Others, like 201 bright stainless steel wire, 201 stainless steel electrolytic-line, 201 stainless steel axle hairpin line.

Chemical Composition of 201 stainless steel :

C %	Cr %	Ni %	Mn %	P %	S %	Si %	N %
≤				≤	≤	≤	
0.15	16-18	3.5-5.5	5.5-7.5	0.06	0.03	0.75	≤0.25

The chromium content in 200 stainless steel series dropped to 15% to 16%, in some cases, to 13% to 14%. Its corrosion resistance is less than the 304 stainless steel, so it can only be used for some industries that corrosion resistance is not strictly required.
